1. 325design-rs.txt
 - a. *partial* database schema/design with SQL-style references clauses used to indicated foreign keys
2. 325design.sql
 - a. nicely-formatted SQL create table statements describing the table's **purpose**, explaining any attribute whose meaning is not immediately clear from its name, and elaborating on the domain of any attribute whose logical domain needs more description than is apparent from its physical domain
3. 325populate.sql
 - a. populates your tables with some example data (which can be fictitious!)
4. 325queries.sql
 - a. eight substantially-different and structurally-different representative queries, including at least some "innovative" ones
5. 325query-result.txt
 - a. Result of query
6. 325reptort1.sql
 - a. three substantially-different and structurally-different representative reports,
7. 325report1-results.txt
 - a. Result of report 1
8. 325show-contents.sql
 - a. one or more select * statements for each table
9. 325result-contents.txt
 - a. Result of show contents
10. 325show-contents.sql
